THE GROWTH PLAYBOOK

The growth team's guide to better attribution.

Stop optimising for ~~installs~~. Start understanding what actually drives revenue.

Linkrunner is a mobile measurement partner (MMP): it connects every campaign, link and creative to the installs, in-app activity, revenue and retention that follow — so you can see which spend is actually working. linkrunner.io →

Campaigns · last 7 days Illustrative

INSTALLS	PURCHASES	BLENDED ROAS
48.2K	3.1K	1.8×

Meta · Creative B	2.6×
Google UAC	1.9×
Creator · Reel 04	1.4×
Meta · Creative A	0.6×

Revenue bars · ROAS → most installs ≠ most revenue

01 What is Linkrunner?

Attribution, beyond downloads

Attribute See which campaigns, channels, links and creatives bring users to your app.

Measure Connect installs to sign-ups, purchases, revenue, ROAS and retention.

Optimise Use those insights to decide what to scale, what to fix and where to spend next.

Ad / Creator (Campaign) → Click (Link / QR) → Install (iOS · Android) → Sign-up (Activation) → Purchase (In-app event) → Revenue (ROAS · LTV)

Attribution ties every stage back to the campaign that started it

02 What can you actually do with it?

One platform, practical outcomes

Campaign attribution
Know where every install and conversion actually came from.

Creative-level performance
Compare creatives side by side and tie each one to revenue and ROAS.

Deep links
Send users straight to the right screen — even after a fresh install, via deferred deep linking.

Revenue & ROAS tracking
See the financial outcome of every acquisition campaign, not just the install count.

Cohorts & retention
Follow how acquired users behave in the days and weeks after install.

iOS & SKAN measurement
Measure iOS campaigns on privacy-aware attribution infrastructure.

Reporting & integrations
Bring ad-network and measurement signals into one view for better decisions.

/pricing
25,000 installs free.
All features included. Pay as you grow →

03 Useful tools. Free to explore. FREE

All tools at linkrunner.io/tools ↗

ROAS Calculator
Model advertising returns and estimate when campaigns break even.
Open tool ↗

CPI Benchmark Explorer
Compare cost-per-install by market, platform, app category and period.
Open tool ↗

LTV Calculator
Estimate lifetime value for subscription, IAP, ad-monetised and hybrid apps.
Open tool ↗

$ / install
10K · 100K · 1M

MMP Cost Calculator
Estimate attribution costs at your install volume and compare pricing.
Open tool ↗

?utm_source=meta
&utm_campaign=q4

UTM Builder
Create consistent campaign-tracking links and QR codes.

04 Linkrunner × Claude

Your attribution workflow, inside Claude.

Linkrunner's MCP connector lets you work with your attribution data in Claude using plain-language prompts — no dashboard digging.

"Which campaigns drove the most installs in the last 7 days?"

"Which campaigns brought users who reached onboarding?"

"Check whether my attribution links and tracking setup are configured correctly."

After connecting and authorising your account, create a project, retrieve your SDK token, and query supported campaign, statistics, funnel and setup info — from the chat.

`https://mcp.linkrunner.io/mcp`

Explore the integration →

Add as a custom connector in Claude. SDK integration still needs a developer; ad data needs the relevant integrations and permissions.

05 Start measuring. No annual lock-in.

1. Visit Linkrunner and create an account.
2. Set up your app project and integrate the right SDK.
3. Configure attribution and the in-app events that matter.
4. Connect supported ad integrations and start analysing performance.
